EDUCATION

Fordham University

B.Sc. in Mathematics & Computer Science

August 2024 – May 2028

New York, NY

- **Relevant Coursework:** Computer Algorithms, Data Structures, Discrete Mathematics
- **Social Chair, Society for Industrial and Applied Mathematics (SIAM):** Organized chapter events, collaborated with SIAM chapters across other universities, and managed the chapter website

TECHNICAL SKILLS

Languages: Python, SQL(PostgreSQL), JavaScript, TypeScript, HTML/CSS

Frameworks & Tools: FastAPI, Next.js, Node.js, React, Redis, PostgreSQL, MongoDB, Docker, Supabase, Vercel, AWS, Linux, Git, nginx

EXPERIENCE

TechX

Software Engineering Extern – Backend & Distributed Systems Cohort

May - August 2026

Remote

- Developing AI Archive, a full-stack web app in **Node.js**, **Next.js**, and **PostgreSQL** enabling users to save, summarize, and compare AI conversations across platforms including ChatGPT, Claude, and Gemini

PROJECTS

PawPath: AI Dog Walking App | *Python, Gemini AI, Google Maps API*

1st in Track - RamHack 26

- Built AI-powered dog walking app featuring embedded **Google Maps** with live GPS tracking, walk history logging, and breed-specific exercise recommendations across **200+** breeds
- Engineered **FastAPI** backend with **8+** RESTful endpoints integrating **Gemini AI** for photo-based breed identification, **Google Maps Platform** (Routes, Places, Weather) for route generation, and real-time air quality and UV index data to flag health risks
- Implemented full CRUD functionality with **Supabase** for dog profile and walk history management, processing **5+** environmental factors (temperature, humidity, AQI, UV index, wind) to generate safety scores

Spoty: Spotify Social Dashboard | *TypeScript, Node.js, React, Express, PostgreSQL, Kysely, Pusher, OAuth 2.0*

- Built a real-time Spotify social dashboard featuring live now-playing feeds, personalized listening stats, and a follow system to surface what friends are currently streaming
- Engineered an **Express/TypeScript** backend with **10 endpoints** integrating the Spotify Web API (currently playing, recently played, top tracks/artists) and **Pusher WebSockets** for real-time broadcast notifications to followers
- Implemented **OAuth 2.0** authentication via Passport.js with full session management and user persistence using Kysely ORM, supporting multi-user friend graphs with **follow/unfollow CRUD operations**

Accentr: AI-Powered Accent & Pronunciation Trainer | *TypeScript, Next.js, ElevenLabs, NextAuth.js*

- Built a full-stack language learning app where users record themselves speaking phrases and receive AI-driven phoneme-level pronunciation feedback and coaching via the **Anthropic Claude API**
- Integrated **ElevenLabs** TTS and STT APIs to demonstrate native-speaker pronunciation and transcribe user attempts, piping transcriptions into Claude for accent comparison and targeted improvement feedback
- Implemented credential-based auth with **NextAuth.js** and bcrypt, modeled a **PostgreSQL** schema via **Prisma** across 6 tables, and built a user dashboard tracking XP, streaks, session history, and achievements

Secure Scalable API | *Go, chi, JWT, PostgreSQL, sqlc, Docker*

- Built a production-grade REST API in **Go** with layered architecture using the repository pattern and **internal/** package isolation to separate transport, business, and persistence concerns
- Implemented **JWT** authentication with access/refresh token flow (HS256) and **RBAC** middleware enforcing role-based route access across admin, user, and public tiers
